Designed and Engineered to be the Best!

“Evolution”- [ev-o-lu-tion] (noun) The gradual development of something into a more complex or better form.

Introducing the most highly evolved offshore center console on the water, Bahama Boat Works along with two leaders in the boating industry- Scott Henley and Robert Sparks welcome you to join them at the summit.

After two decades of experience striving to bring you the best open fishing machine on the water the evolutionary process is complete. Beginning in 1990 Sparks and Henley saw a need for a boat that combined speed and a smooth ride, ample work space and storage, fish ability along with sexy lines. Starting with a proven performance hull and their knowledge of the needs of a fisherman, the first step in the process was completed. After several years of success with this project they listened to the wishes of the owners and took this boat to the next level. The new and improved version took on a more sophisticated look and finish work was stepped up to suit the demands of the evolving industry.

Taking this product to the top of the food chain was a natural progression and Bahama Boat Works answered the call. The end result is a fishing machine that combines a ride that is unparalleled, speed and comfort, dock appeal, along with workspace and storage that rivals boats twice her size. The Bahama 31 and new 41 represent the pinnacle of the evolutionary process.

This vessel represents the culmination of Sparks' many years of experience in the design and construction of high quality FRP composite fishing platforms along with Henley's reputation for delivering the same undeniable quality and craftsmanship in the final rigged product.

From layout to her fit and finish, the Bahama includes many unusually clever details. All hatches and doors have full liners and utilize a proprietary double-seal design for true dry storage. The fully lined console contains a spacious head featuring six foot six inch headroom and eleven feet of below deck storage area. Each hardware component has been carefully chosen for their individual beauty and durability. All latches and hinges are recessed and many blind fasteners are utilized, resulting in very few visible screw heads. From the most mundane unseen fastener to the electrical wiring harnesses, every component used is top shelf.

Construction quality is also of the highest standard. All gelcoat is CCP ArmorFlex, with the highest degree of UV resistance available. Vinylster resin provides the ultimate in blister resistance, and a ceramic matrix transom eliminates all wood from the vessel. Four full-height fiberglass stringers and integral wells add to the anvil- tough construction of this craft. Heavy-gauge aluminum fuel tanks provide 368 usable gallons of capacity offering extended fishing range.

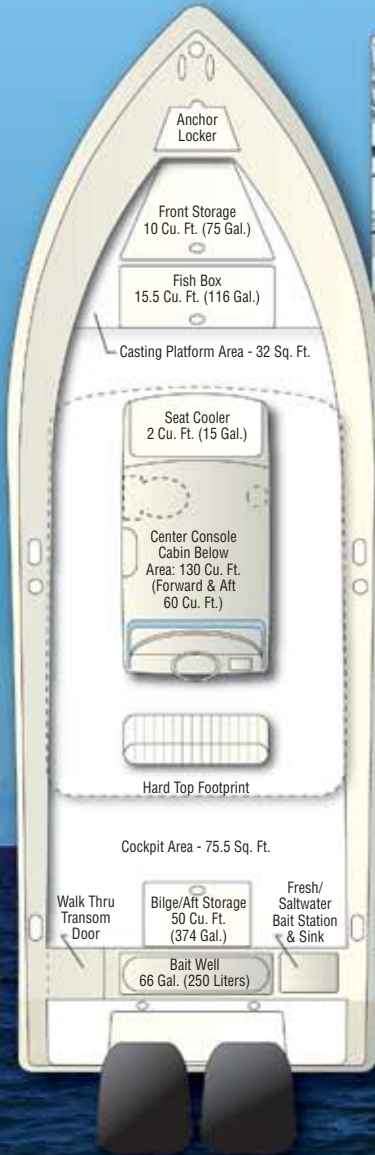

The speed and performance of the Bahama, with her eleven foot beam for superior stability is sure to impress anyone sea-trialing her. If the desire for perfection is what you're after when you choose the boat of your dreams, you owe it to yourself to ride on one and join the Apex predators at the top of the food chain.

Sales and marketing rights for Bahama Boat Works have been granted to Henley's Custom Marine who will also supply custom rigging and outfitting services. The unique combined experience of Bahama Boat Works along with Henley's Custom Marine will serve and provide you with this remarkable new boat and the ultimate in personal service.
